

Computer Graphics Final Project Marking Criteria

Seminar Presentation (10 marks)

Concept & Understanding (70%)

- Motivation: Motivation is compelling and problem-driven; technique choice is clearly tied to stated goals.
- Understanding of the theory / applied technique: Clear understanding of the method/technique with thorough explanation.
- Sophistication of graphics techniques / Novelty of proposed method: Applies advanced graphic techniques or proposes novel solution.
- Interpretation of results: Demonstrates deep insight into results; and understand why each component or technique works or fails.

Presentation (30%)

- Layout & Structure: Visually attractive, well-organized.
- Delivery: Confident and fluent; maintain good pacing.
- Timing: Stays within allocated time (4-5 minutes).

Project Report (15 marks)

Overall (10%)

- Format: Single column, A4, using the NIPS LaTeX template, 5-8 pages (as per instructions).
- Reference: Include proper citations for all publications, libraries, existing code, frameworks, and AI tools (e.g., ChatGPT, DeepSeek) leveraged by the project.
- Quality: The report is self-contained and written in the style of a mini conference paper.

For rendering competition

Introduction (20%)

- Clearly state the motivation behind the project.
- Define the project objectives. Analysis of the problem being addressed.
- Brief summary of previous work.

Method (35%)

- Provide a detailed explanation of the main methods and key graphics techniques you have implemented (e.g., ray tracing, path tracing, specific rasterization features).
- The technical sophistication, novelty, or complexity of the chosen and implemented rendering methods and features.
- Include a brief description of the 3D content created or sourced for your scene.

Experiments / Results (25%)

- Explain how your implemented method was evaluated (e.g., efficiency, rendering quality).
- Perform a comprehensive evaluation to each key implemented graphics feature and its contribution to the final rendering quality or artistic goals.
- The report should include a concise analysis of rendering quality and, if relevant, efficiency or challenges faced.

Conclusion (10%)

- Summarize the project and its main outcomes/achievements.
- Discuss any limitations encountered and potential future work or improvements.

For paper implementation

Introduction (20%)

- Clearly state the motivation behind the project.
- Define the project objectives. Analysis of the problem being addressed.
- Brief summary of previous work.

Method (35%)
